

Supply Chain Risk - identify, measure, manage

Wednesday 28th April, in Maidenhead

Most companies design and organize their supply chain from a viewpoint of optimal performance in “normal operational conditions”, i.e. in an (ideal) world without any disturbance. This is remarkable in view of recent studies showing that “... 73 % of global industrial companies suffered from a major supply chain disruption in the last 5 years, this is: with a considerable effect on their EBITDA and/or share value”.

This apparent contrast motivated the Vlerick Management School and MÖBIUS to team up for a research program addressing Supply Chain Risk Management in industrial companies.

The seminar will cover:

- The different supply chain risks which considerably impact on industrial companies;
- How a methodology can be developed to quantify the impact of supply chain risks;
- How to define risk-mitigating strategies to reduce the impact of supply chain risks.

Programme:

18.00 – 18.30 Arrival & Registration

18.30 – 20.00 Presentation & Discussion

20.00 – 20.30 Buffet & Finish
